Ideation Phase
Brainstorm & Idea Prioritization Template

Date	19 October,2026
Team ID	
Project Name	Medical Diagnosis Center by Service Portal(ServiceNow)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem statement (How Might We):

How might we provide patients with one simple, guided Service Portal to browse diagnostic tests, book and track appointments, manage cancellations and refunds, and access medical reports, while reducing manual work through automation?

Team gathering & preparation:

Participant / Role	Gorige Sowmya – ServiceNow developer
Goal of session	Plan a Medical Diagnosis Center solution using custom tables, Service Portal widgets, and Business Rules to manage diagnostic tests, appointments, reports, and automation.
Duration	10 minutes preparation, 1 hour collaboration
Key rules followed	Stay in topic · Defer judgment · Go for volume · Encourage wild ideas · Listen to others · Be visual

Step-2: Brainstorm, Idea Listing and Grouping

Ideas listed by the team and grouped into themes:

Theme	Ideas
A. Patient and diagnostic test data	• Create a Patient Table to store patient details, contact information, and user references. • Create a Diagnostic Test Table to manage test names, codes, categories, duration, price, and availability. • Use structured fields and unique identifiers to organize patient and diagnostic test records.
B. Appointment and booking management	• Create an Appointment Table to store patient references, selected tests, appointment dates, slot times, and payment details. • Add appointment status and approval status fields to track each booking. • Store confirmation details, rejection reasons, payment status, and refund amounts. • Validate appointment information before processing bookings.
C. Medical report management	• Create a Report Table linked to patients and appointments. • Store report numbers, report dates, findings, and uploaded report files. • Record the staff member who verifies each report. • Provide access to relevant medical reports through the portal.
D. Automation and security	• Automatically create a report record when an appointment meets the configured completion condition. • Calculate a 10% cancellation charge and populate the remaining refund amount. • Populate rejection details when an administrator rejects an appointment or slot. • Use ACLs and role-based access to protect patient and report information; consider notifications, dashboards, and Virtual Agent support as future enhancements.

Step-3: Idea Prioritization

Ideas were voted on by impact (value to employees and support team) and effort (time and complexity), then ranked:

Idea	Impact	Effort	Rank / Decision
Scoped application setup for Medical Diagnosis Center	High	Low	1 – Phase 2 foundation
Patient, Diagnostic Test, Appointment, and Report tables	High	Medium	2 – Phase 2: Data Architecture

Diagnostic test catalog and appointment booking portal UI	High	Medium	3 – Phase 3: UI/UX Development
Appointment statuses, approval fields, and booking management	High	Medium	4 – Phase 2: Backend Configuration
Business Rule to create a report when appointment is completed	High	Medium	5 – Implemented (Automation Logics)
Cancellation Business Rule: 10% charge and remaining refund amount	High	Medium	6 – Implemented (Automation Logics)
Rejection-details Business Rule for rejected appointments/slots	High	Low	7 – Implemented (Automation Logics)
ACLs, testing, documentation, and final demonstration	High	Medium	8 – Phase 4/5: Security & Final Presentation
